PLANTING INSTRUCTIONS

Roots should be planted in trenches or holes, four inches deep in heavy soil and six inches deep in sandy soil laid flat down (not on end) and covered with earth not over two inches in depth filling in as the plant develops. Where drainage is poor, do not plant so deep and keep a furrow open between rows to facilitate drainage in wet weather. You cannot expect a dahlia to grow in a wet soggy ground or expect replacements when planted in ground in this condition. Wait a few days for the ground to dry out somewhat.
